

Telling Time Craft

How to use this template: Cut out the circle below and place it in the center of a paper plate on the bottom. Loosely tape it in place. Use it to make a hole in the middle and slits for the digital clock face. Then remove the template. Draw on the details of the analog clock and attach the clock hands with a brad in the middle hole. Then print and cut out the number strips, taping each set together (tape on front and back). Slide the number strips through the slits that you cut have precut and then tape each into a loop.
